RATINGS: Standby ratings are continuous for the duration of any power outage. No overload capacity is specified at this rating. Prime ratings are continuous per BS 5514, DIN 6271, ISO-3046, and IEC 34-1 with 10% overload capacity one hour in twelve hours. All single-phase units are rated at 1.0 power factor. All three-phase units are rated at 0.8 power factor. Contact the factory for ratings of city water-cooled and remote radiator models. Larger alternators may be used to meet special application requirements. Availability is subject to change without notice. The manufacturer of Spectrum products reserves the right to change the design or specifications without notice and without any obligation or liability whatsoever. Contact your local Spectrum products distributor for availability. DERATION: Maximum altitude before generator set deration, ft. (m): 500 (152). Altitude deration factor, % per 1000 ft. (305 m): 4.0. Maximum intake air temperature before generator set deration, °F (°C): 85 (29). Temperature deration factor, % per 10°F (5.5°C): 1.0.
